

pwn.college Extra Credit Opportunity

Students have the opportunity to replace their lowest homework grade with an extra credit opportunity through pwn.college. This is ASU's training platform, and is also used for one of their computer science courses. The content is robust and teaches a number of concepts in bite-sized form.

Extra credit is offered by completing one (1) of the following choice of courses:

- [Assembly Crash Course](#)
- [Shellcode Injection](#)
- [Reverse Engineering](#)

Difficulty varies based on personal skill set, though they are generally arranged in the likely order of difficulty from easiest to hardest. The courses vary in length, and students should take that into consideration as well. All modules in the course must be completed for full extra credit, and extra credit is all or nothing. We will NOT award partial credit for partial completion of a course. That means, for example, all 30 challenges in the Assembly Crash Course must be completed, which will result in 300 pts of extra credit replacing the lowest HW grade. Failure to complete all challenges will result in 0 points for this extra credit.

Requirements

For credit, students must submit the following:

- Write-ups for each challenge, in the same vein as class HW, including:
 - The instructions used for Assembly Crash Course
 - The shellcode used in Shellcode Injection
 - The payload used in Reverse Engineering
- Their username and unique ID (as described in the following section. Failure to construct and provide a username as required will result in no credit)
- Submission is due by Sunday, May 14 at 11:59 PM Eastern Time on Brightspace

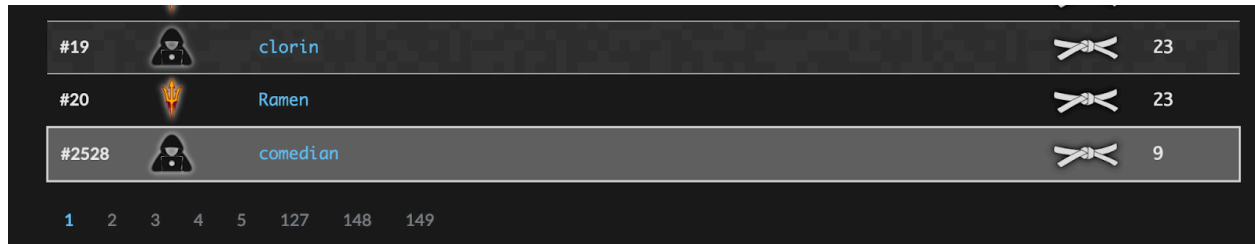

A reminder: payloads/shellcode/instructions are not substitutes for a write-up. They complement and support write-ups, but cannot stand on their own.

Creating Your Username

You must create your username as follows to receive credit. This is required so that we can validate the authenticity of your efforts, since the platform is not controlled by NYU.

1. Create an account using your NetID as the username. If you have a collision with your NetID, please reach out for instruction
2. Complete all the challenges in the course of choice using this account

3. In your submission, include your unique ID number. You can find this number using the following process
- Go to the course you completed (e.g., Assembly Crash Course)
 - Scroll to the bottom to the Module Ranking section, which will show your account in a highlighted bar
 - Click on your account
 - Find your unique ID in the URL. In the example below, the ID is 12467
 - Report this ID in your write-up. Failure to do so will result in no credit
